

PREVENTIVE MAINTENANCE

Improve Worker Safety • Maximize Equipment Uptime • Raise Overall Lab Hygiene

SAFETY. HYGIENE. UPTIME. RESULTS.

SCIMEDICO
YOUR RESULTS TEAM

Scimedico provides customers with cost effective and impactful preventive maintenance solutions.

PREVENTIVE MAINTENANCE EQUALS A SAFER, CLEANER, MORE PRODUCTIVE LAB

The essential work conducted everyday in all pathology, histology and morgue environments produces a variety of safety, hygiene, and basic workplace by-product. Managers must address ventilation, chemical exposure levels, infected material, chemical buildup, ergonomics, and general hygiene levels on an ongoing basis. Those same managers also have to deal with the ongoing function of equipment and the quality of the workplace that their teams work in. Scimedico's preventive maintenance solutions are focused on maximizing team member safety, addressing lab hygiene, keeping equipment up and running, and maintaining the workplace as a clean and productive environment.

THE COMPREHENSIVE SCIMEDICO APPROACH

The Scimedico approach to preventive maintenance is known as the "About Results Preventive Maintenance Methodology." The process includes equipment assessment and testing of all interior and exterior functions. This is followed by deep cleaning and disinfection of the entire unit. The service concludes with cleaning and testing of all ventilation. Once completed, Scimedico provides a detailed service summary. Scimedico conducts preventive maintenance on-site during regular business hours. The option of working after hours is also available to accommodate workflow and schedules.

THE SCIMEDICO COMMITMENT

At Scimedico we are passionate about what we do. Our preventive maintenance solutions are designed to address the overall safety of your team, keep your equipment up and running, assist you to optimize and make best use of your product warranty, and provide a hygienic and productive workplace.

OVERVIEW

Scimedico offers a solution that is right for everyone. Our preventive maintenance solutions fall into three categories: Annual, Biannual, and Quarterly.

ANNUAL

Annual preventive maintenance offers customers a cost effective, minimum solution to address ongoing preventive maintenance needs.

BIANNUAL

Conducting preventive maintenance twice a year optimizes the process by allowing for the appropriate time spent on the equipment in question and by providing for an "intra" year part replacement cycle.

QUARTERLY

This solution is for environments that run multiple shifts or have heavy volume.

INTERIM SERVICE AND REPAIR

Scimedico also provides interim service and repair as part of the preventive maintenance process or as a standalone service.

VASSAR BROTHER'S HOSPITAL CASE STUDY

Head Pathologists Assistant Larry Marquis, the former President of the American Pathology Assistants Association, turned to Scimedico when he opted to conduct preventive maintenance in his lab at Vassar Brother's Hospital in Poughkeepsie, New York.

Scimedico's initial services at Vassar Brother's resulted in doubling of air flow, an improvement in equipment function, and Scimedico being awarded a three year preventive maintenance contract.

SAFE WORK ENVIRONMENT

Scimedico's preventive maintenance solutions begin and end with safety. Scimedico services address both hygiene and necessary repairs, but the critical step is ventilation cleaning and testing. We also test and report on all chemical management functions.

WORKPLACE HYGIENE

The buildup of chemical and biologic material is a natural by-product of the important work done in the lab. The Scimedico approach attacks this buildup through our deep, multiple step process.

EQUIPMENT FUNCTION AND UPTIME

Each moment your equipment is down, your facility's ability to safely deliver on its mission is impacted. Scimedico services survey your equipment, optimize warranty utilization, and catch problems before they occur.

QUALITY WORK ENVIRONMENT

Scimedico believes there is a connection between the quality of your lab environment and preventive maintenance. Scimedico's solutions offer your team with a hygienic base from which to conduct your lab's critical mission.

before

after

"Based on the outcome, the Scimedico preventive maintenance is here to stay in our lab. The Scimedico process literally doubled the air flow on our units, repaired down functions, and our units look like they are new."
